

Axians Switzerland Offers AI Business Consulting

Axians, the ICT brand of VINCI Energies, is now offering AI Business Consulting services in Switzerland. This service complements the IT provider's technological capabilities with a holistic, human-centered consulting approach that bridges technology, organization, and people in the digital era.

Companies of all sizes and industries are currently facing the challenge of making their processes more efficient and effective through the use of artificial intelligence. The adaptation and seamless integration of AI into existing systems and processes often present a technical challenge and, even more so, an organizational hurdle.

Additionally, employee scepticism must be overcome. Güven Zorba, Business Area Manager IT & Managed Services, is convinced that the strategic portfolio expansion brings added value to customers: "We accompany and advise customers holistically and strategically on their transformative changes in the digital era. We combine the best possible technological solutions with a human-centered view of transformation processes."

The new AI Business Consulting service is based on an integrative consulting approach that combines people, technology, and organization. Axians takes on the role of a technology-neutral partner.

Mirco Stoffel, Head of Business Consulting for AI, is convinced: "Successfully implementing AI in companies means transforming organizations, not just introducing technology." He classifies the new service as follows: "As an independent consultant, we aim to provide innovative, responsible, and sustainable AI solutions."

Axians Switzerland complements the existing broad competencies and offerings within the VINCI Energies network with the new service, thereby solidifying its position as a comprehensive and innovative IT service provider.
